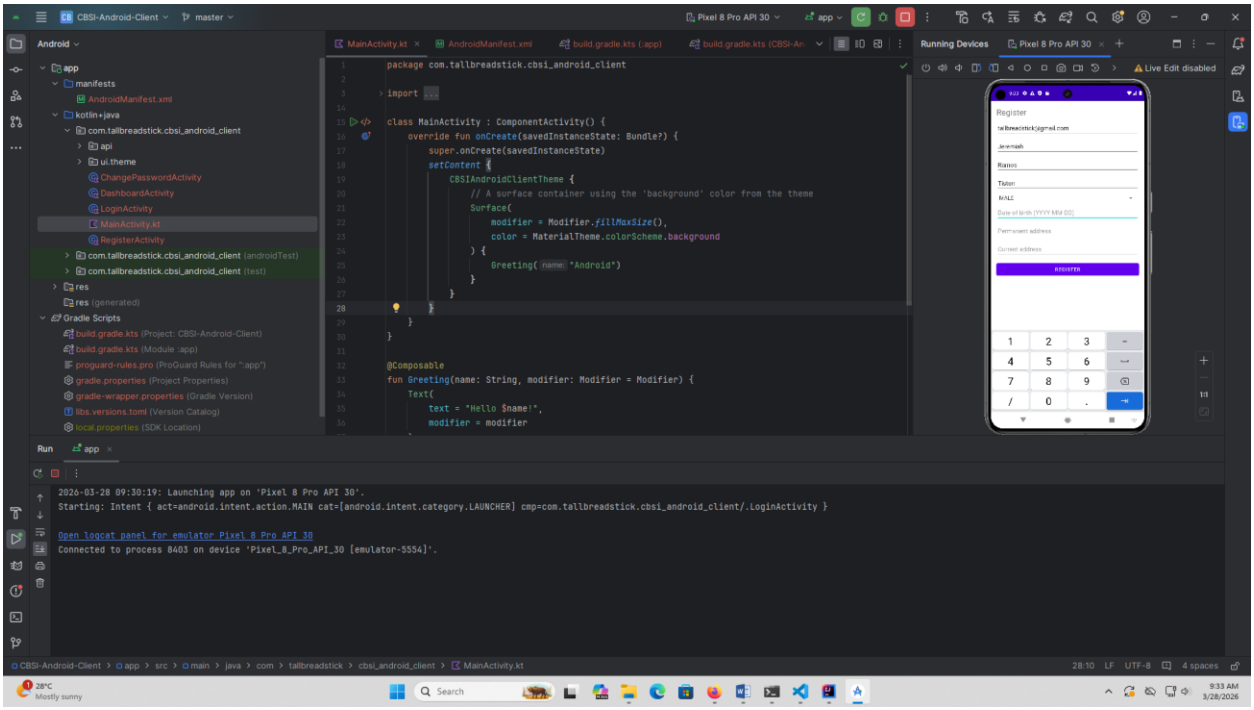
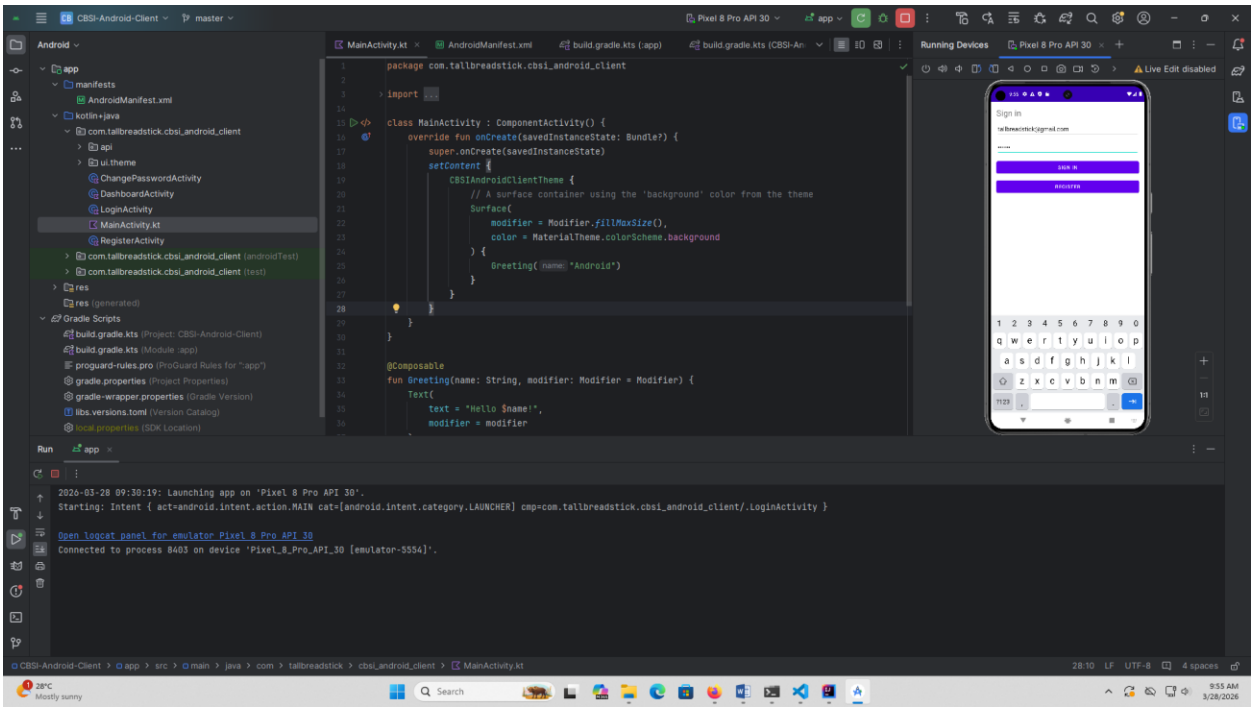
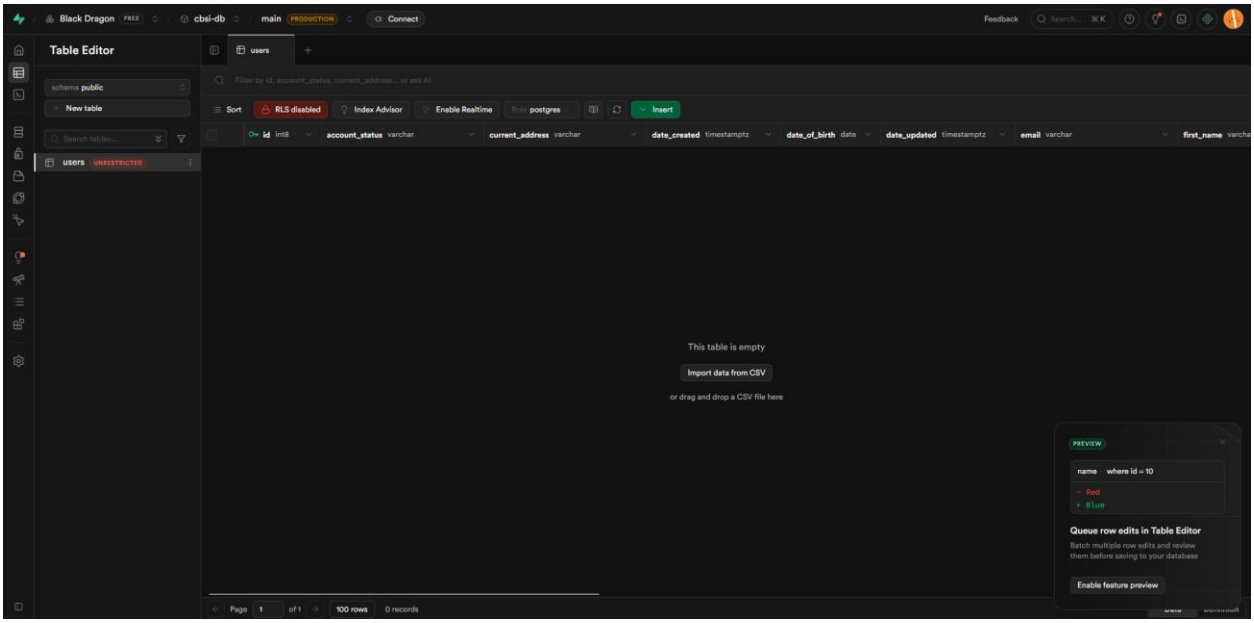
Supabase Password: `BNrdjoR35SmLr8Wx`

Swap this out for the field within application.properties labelled <password>

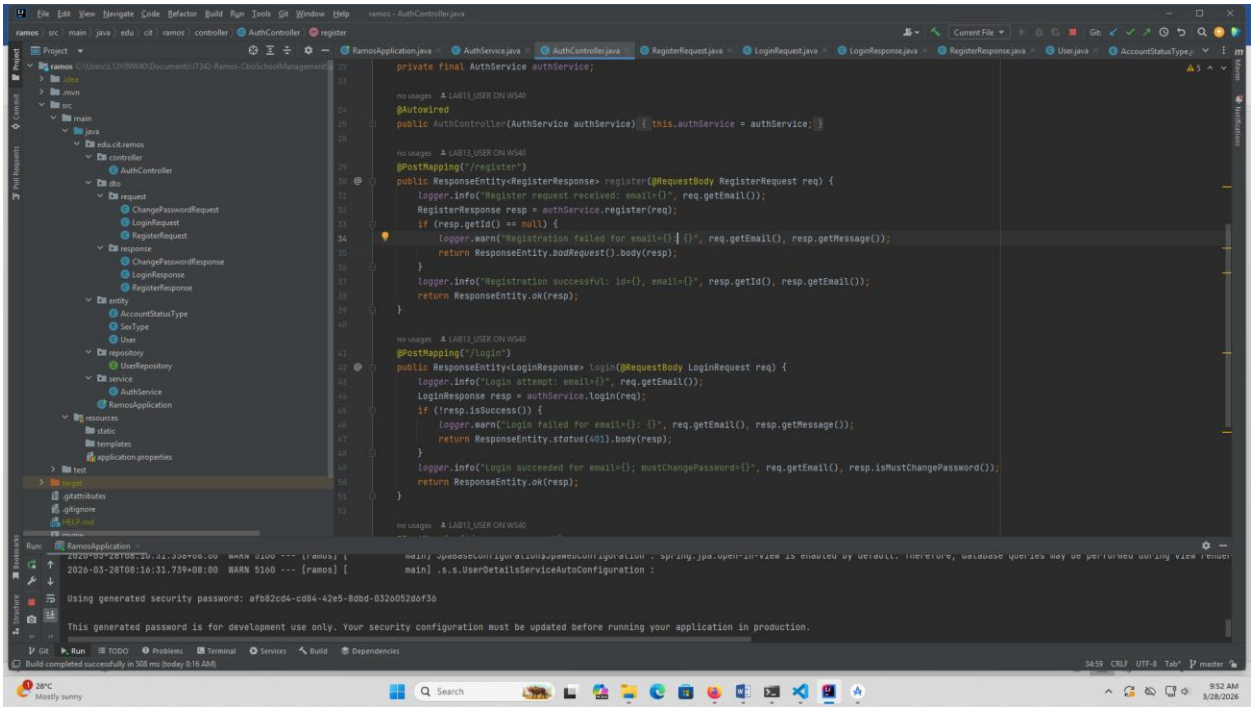




Here we have the basic login/register layout. Like the web interface, accounts are created and approved by the admin or account approval staff. Registration here is simply a mockup, and sign ins cannot be verified until account verification is set up.



The database is currently empty, but will be populated with accounts that must first be approved by admins or account approval staff.



Above are the controllers / endpoints for logging in and registration. Later on, registration will also have a bulk endpoint for registering multiple accounts, to be then left for pending approval by admins.
